

Method for Making Secured Personal Identity Card and Procedures for Validation and Obtaining Secure Personal Information

Abstract

- 5 A method for making a secured personal identity card and procedures for validation and obtaining secure personal information includes the steps of (a) collecting a set of personal information from a user into an identity file wherein the identity file includes at least one section; (b) receiving an inputting personal identification number ("PIN"); and (c) comparing the inputting PIN with a master PIN preset in the identity file.
- 10 Therefore, the user selectively and securely releases only specific information based upon the inputting PIN as compared to the biographical information guarded by the master PIN.
